

# Package: MetaNet (via r-universe)

October 15, 2024

**Type** Package

**Title** Network Analysis for Omics Data

**Version** 0.2.1

**Description** Comprehensive network analysis package. Calculate correlation network fastly, accelerate lots of analysis by parallel computing. Support for multi-omics data, search sub-nets fluently. Handle bigger data, more than 10,000 nodes in each omics. Offer various layout method for multi-omics network and some interfaces to other software ('Gephi', 'Cytoscape', 'ggplot2'), easy to visualize. Provide comprehensive topology indexes calculation, including ecological network stability.

**License** GPL-3

**Encoding** UTF-8

**Roxygen** list(markdown = TRUE)

**RoxygenNote** 7.2.3

**Depends** R (>= 4.1.0), igraph (>= 1.3.5)

**LazyData** true

**Imports** graphics, dplyr, ggplot2 (>= 3.2.0), ggnewscale, ggrepel, grDevices, magrittr, reshape2, stats, tibble, utils, pcutils (>= 0.2.6), rlang

**Suggests** pheatmap, vegan, stringr, foreach, doSNOW, snow, knitr, rmarkdown, prettydoc, Hmisc, gifski, ggraph, networkD3, ggpmisc, ggtree, treeio, circlize, ggpubr, corrplot, philentropy

**VignetteBuilder** knitr

**BugReports** <https://github.com/Asa12138/MetaNet/issues>

**URL** <https://github.com/Asa12138/MetaNet>

**ByteCompile** true

**biocViews** DataImport, Network analysis, Omics, Software, Visualization

**Repository** <https://asa12138.r-universe.dev>

**RemoteUrl** <https://github.com/asa12138/metanet>

**RemoteRef** HEAD

**RemoteSha** dea2e92ba07c59dbd3efcbe8014bdca3af4d0641

anno_edge	<i>Use dataframe to annotate edges of an igraph</i>
-----------	---

---

## Description

Use dataframe to annotate edges of an igraph

## Usage

```
anno_edge(go, anno_tab, verbose = TRUE)
```

## Arguments

go	metanet an igraph object
anno_tab	a dataframe using to annotate (with rowname or a name column)
verbose	logical

## Value

a annotated igraph object

## See Also

Other manipulate: [anno\\_vertex\(\)](#), [c\\_net\\_annotate\(\)](#), [c\\_net\\_filter\(\)](#), [c\\_net\\_load\(\)](#), [c\\_net\\_save\(\)](#), [c\\_net\\_union\(\)](#), [get\\_e\(\)](#), [get\\_n\(\)](#), [get\\_v\(\)](#), [is\\_metanet\(\)](#)

## Examples

```
data("c_net")
anno <- data.frame("from" = "s__Pelomonas_puraquae", "to" = "s__un_g__Rhizobium", new_atr = "new")
anno_edge(co_net, anno) -> anno_net
```

---

anno_vertex	<i>Use data.frame to annotate vertexes of metanet</i>
-------------	---

---

**Description**

Use data.frame to annotate vertexes of metanet

**Usage**

```
anno_vertex(go, anno_tab, verbose = TRUE)
```

**Arguments**

go	metanet object
anno_tab	a dataframe using to annotate (with rowname or a "name" column)
verbose	logical

**Value**

a annotated metanet object

**See Also**

Other manipulate: [anno\\_edge\(\)](#), [c\\_net\\_annotate\(\)](#), [c\\_net\\_filter\(\)](#), [c\\_net\\_load\(\)](#), [c\\_net\\_save\(\)](#), [c\\_net\\_union\(\)](#), [get\\_e\(\)](#), [get\\_n\(\)](#), [get\\_v\(\)](#), [is\\_metanet\(\)](#)

**Examples**

```
data("c_net")
data("otutab", package = "pcutils")
anno_vertex(co_net, taxonomy)
```

---

arc_count	<i>Edgelist</i>
-----------	-----------------

---

**Description**

Edgelist for `c_net_from_edgelist()`

---

arc_taxonomy	<i>Edgelist</i>
--------------	-----------------

---

**Description**

Edgelist for `c_net_from_edgelist()`

---

as.ggig *Transfer an igraph object to a ggig*

---

**Description**

Transfer an igraph object to a ggig

**Usage**

```
as.ggig(go, coors = NULL)
```

**Arguments**

go igraph or meatnet  
coors coordinates for nodes,columns: name, X, Y

**Value**

ggig object

**See Also**

Other plot: [c\\_net\\_plot\(\)](#), [input\\_gephi\(\)](#), [netD3plot\(\)](#), [olympic\\_rings\\_net\(\)](#), [plot.ggig\(\)](#), [twocol\\_edgelist\(\)](#), [venn\\_net\(\)](#)

**Examples**

```
as.ggig(co_net, coors = c_net_layout(co_net)) -> ggig
plot(ggig)
as.ggig(multi1, coors = c_net_layout(multi1)) -> ggig
plot(ggig, labels_num = 0.3)
```

---

as\_arc *Layout as a arc*

---

**Description**

Layout as a arc

**Usage**

```
as_arc(angle = 0, arc = pi)
```

**Arguments**

angle anticlockwise rotation angle  
arc the radian of arc

**Value**

A two-column matrix, each row giving the coordinates of a vertex, according to the ids of the vertex ids.

**See Also**

Other layout: [as\\_circle\\_tree\(\)](#), [as\\_line\(\)](#), [as\\_polyarc\(\)](#), [as\\_polycircle\(\)](#), [as\\_polygon\(\)](#), [c\\_net\\_layout\(\)](#)

**Examples**

```
as_arc()(co_net)
c_net_plot(co_net, coors = as_arc(pi / 2), rescale = FALSE)
```

---

as_circle_tree	<i>Layout as a circle_tree</i>
----------------	--------------------------------

---

**Description**

Layout as a circle\_tree

**Usage**

```
as_circle_tree()
```

**Value**

A two-column matrix, each row giving the coordinates of a vertex, according to the ids of the vertex ids.

**See Also**

Other layout: [as\\_arc\(\)](#), [as\\_line\(\)](#), [as\\_polyarc\(\)](#), [as\\_polycircle\(\)](#), [as\\_polygon\(\)](#), [c\\_net\\_layout\(\)](#)

---

as_line	<i>Layout as a line</i>
---------	-------------------------

---

**Description**

Layout as a line

**Usage**

```
as_line(angle = 0)
```

**Arguments**

angle                    anticlockwise rotation angle

**Value**

A two-column matrix, each row giving the coordinates of a vertex, according to the ids of the vertex ids.

**See Also**

Other layout: [as\\_arc\(\)](#), [as\\_circle\\_tree\(\)](#), [as\\_polyarc\(\)](#), [as\\_polycircle\(\)](#), [as\\_polygon\(\)](#), [c\\_net\\_layout\(\)](#)

**Examples**

```
as_line()(co_net)
c_net_plot(co_net, coors = as_line(pi / 2))
```

---

as\_polyarc

*Layout as a polyarc*

---

**Description**

Layout as a polyarc

**Usage**

```
as_polyarc(n = 3, space = pi/3)
```

**Arguments**

n                        how many arcs of this poly\_arc  
 space                    the space between each arc, default: pi/3

**Value**

A two-column matrix, each row giving the coordinates of a vertex, according to the ids of the vertex ids.

**See Also**

Other layout: [as\\_arc\(\)](#), [as\\_circle\\_tree\(\)](#), [as\\_line\(\)](#), [as\\_polycircle\(\)](#), [as\\_polygon\(\)](#), [c\\_net\\_layout\(\)](#)

**Examples**

```
as_polyarc()(co_net)
```

---

as_polycircle	<i>Layout as a polycircle</i>
---------------	-------------------------------

---

**Description**

Layout as a polycircle

**Usage**

```
as_polycircle(n = 2)
```

**Arguments**

n                    how many circles of this polycircle

**Value**

A two-column matrix, each row giving the coordinates of a vertex, according to the ids of the vertex ids.

**See Also**

Other layout: [as\\_arc\(\)](#), [as\\_circle\\_tree\(\)](#), [as\\_line\(\)](#), [as\\_polyarc\(\)](#), [as\\_polygon\(\)](#), [c\\_net\\_layout\(\)](#)

**Examples**

```
as_polycircle()(co_net)
```

---

as_polygon	<i>Layout as a polygon</i>
------------	----------------------------

---

**Description**

Layout as a polygon

**Usage**

```
as_polygon(n = 3, line_curved = 0.5)
```

**Arguments**

n                    how many edges of this polygon  
line\_curved        line\_curved 0~0.5

**Value**

A two-column matrix, each row giving the coordinates of a vertex, according to the ids of the vertex ids.

**See Also**

Other layout: [as\\_arc\(\)](#), [as\\_circle\\_tree\(\)](#), [as\\_line\(\)](#), [as\\_polyarc\(\)](#), [as\\_polycircle\(\)](#), [c\\_net\\_layout\(\)](#)

**Examples**

```
as_polygon()(co_net)
```

---

cal\_sim

*Calculate similarity for one t(otutab)*

---

**Description**

Calculate similarity for one t(otutab)

**Usage**

```
cal_sim(totu, totu2 = NULL, method = "bray")
```

**Arguments**

totu            t(otutab), row are samples, column are features.  
 totu2          t(otutab) or NULL, row are samples, column are features.  
 method        Dissimilarity index, see [vegdist](#).

**Value**

similarity = 1-distance

**See Also**

[vegdist](#)

Other calculate: [c\\_net\\_calculate\(\)](#), [fast\\_cor\(\)](#), [p.adjust.table\(\)](#), [read\\_corr\(\)](#)

**Examples**

```
if (requireNamespace("vegan")) {
  data("otutab", package = "pcutils")
  t(otutab) -> totu
  cal_sim(totu) -> sim_corr
}
```

---

check_tabs	<i>Check tables and extract common samples</i>
------------	--

---

**Description**

Check tables and extract common samples

**Usage**

```
check_tabs(...)
```

**Arguments**

...            tables

**Value**

formatted tables

**Examples**

```
data("otutab", package = "pcutils")
check_tabs(otutab)
```

---

clean_igraph	<i>Clean a igraph object</i>
--------------	------------------------------

---

**Description**

Clean a igraph object

**Usage**

```
clean_igraph(go, direct = TRUE)
```

**Arguments**

go            igraph, metanet objects  
direct        direct?

**Value**

a igraph object

---

`clean_multi_edge_metanet`*Clean multi edge metanet to plot*

---

**Description**

Clean multi edge metanet to plot

**Usage**

```
clean_multi_edge_metanet(go)
```

**Arguments**

`go` metanet object

**Value**

metanet object

**Examples**

```
g <- igraph::make_ring(2)
g <- igraph::add.edges(g, c(1, 1, 1, 1, 2, 1))
plot(g)
plot(clean_multi_edge_metanet(g))
```

---

`Cohesion`*Cohesion calculation*

---

**Description**

Cohesion calculation

Plot cohesion

**Usage**

```
Cohesion(otutab, reps = 200, threads = 1, mycor = NULL, verbose = TRUE)
```

```
## S3 method for class 'cohesion'
plot(x, group, metadata, mode = 1, ...)
```

**Arguments**

otutab	otutab
reps	iteration time
threads	threads
mycor	a correlation matrix you want to use, skip the null model build when mycor is not NULL, default: NULL
verbose	verbose
x	Cohesion() result (cohesion object)
group	group name in colnames(metadata)
metadata	metadata
mode	plot mode, 1~2
...	additional arguments for <code>group_box</code> (mode=1) or <code>group_box</code> (mode=2)

**Value**

Cohesion object: a list with two dataframe  
a ggplot

**References**

Herren, C. M. & McMahon, K. (2017) Cohesion: a method for quantifying the connectivity of microbial communities. doi:10.1038/ismej.2017.91.

**Examples**

```
data("otutab", package = "pcutils")
# set reps at least 99 when you run.
Cohesion(otutab[1:50, ], reps = 19) -> cohesion_res
if (requireNamespace("ggpubr")) {
  plot(cohesion_res, group = "Group", metadata = metadata, mode = 1)
  plot(cohesion_res, group = "Group", metadata = metadata, mode = 2)
}
```

---

co\_net

*MetaNet networks*

---

**Description**

MetaNet co\_nets

---

co_net2	<i>MetaNet networks</i>
---------	-------------------------

---

**Description**

MetaNet co\_nets

---

co_net_rmt	<i>MetaNet networks</i>
------------	-------------------------

---

**Description**

MetaNet co\_nets

---

c_net_annotate	<i>Annotate a metanet</i>
----------------	---------------------------

---

**Description**

Annotate a metanet

**Usage**

```
c_net_annotate(go, anno_tab, mode = "v", verbose = TRUE)
```

**Arguments**

go	metanet object
anno_tab	a dataframe using to annotate (mode v, e), or a list (mode n)
mode	"v" for vertex, "e" for edge, "n" for network
verbose	logical

**Value**

a annotated metanet object

**See Also**

Other manipulate: [anno\\_edge\(\)](#), [anno\\_vertex\(\)](#), [c\\_net\\_filter\(\)](#), [c\\_net\\_load\(\)](#), [c\\_net\\_save\(\)](#), [c\\_net\\_union\(\)](#), [get\\_e\(\)](#), [get\\_n\(\)](#), [get\\_v\(\)](#), [is\\_metanet\(\)](#)

**Examples**

```

data("c_net")
anno <- data.frame("name" = "s__Pelomonas_puraquae", new_atr = "new")
co_net_new <- c_net_annotate(co_net, anno, mode = "v")
get_v(co_net_new, c("name", "new_atr"))

anno <- data.frame("from" = "s__Pelomonas_puraquae", "to" = "s__un_g__Rhizobium", new_atr = "new")
co_net_new <- c_net_annotate(co_net, anno, mode = "e")
get_e(co_net_new, c("from", "to", "new_atr"))

co_net_new <- c_net_annotate(co_net, list(new_atr = "new"), mode = "n")
get_n(co_net_new)

```

---

c_net_build	<i>Construct a metanet from a corr object</i>
-------------	---

---

**Description**

Construct a metanet from a corr object

**Usage**

```

c_net_build(
  corr,
  r_threshold = 0.6,
  p_threshold = 0.05,
  use_p_adj = TRUE,
  delete_single = TRUE
)

```

**Arguments**

corr	corr object from <code>c_net_calculate()</code> or <code>read_corr()</code> .
r_threshold	r_threshold (default: >0.6).
p_threshold	p_threshold (default: <0.05).
use_p_adj	use the p.adjust instead of p.value (default: TRUE), if p.adjust not in the corr object, use p.value.
delete_single	should delete single vertexes?

**Value**

an metanet object

**See Also**

Other build: [c\\_net\\_from\\_edgelist\(\)](#), [c\\_net\\_set\(\)](#), [c\\_net\\_update\(\)](#), [multi\\_net\\_build\(\)](#)

**Examples**

```

data("otutab", package = "pcutils")
t(otutab) -> totu
metadata[, 3:10] -> env
c_net_calculate(totu) -> corr
c_net_build(corr, r_threshold = 0.65) -> co_net

c_net_calculate(totu, env) -> corr2
c_net_build(corr2) -> co_net2

```

---

c_net_calculate	<i>Calculate correlation for one or two t(otutab), or distance for one t(otutab).</i>
-----------------	---

---

**Description**

Calculate correlation for one or two t(otutab), or distance for one t(otutab).

**Usage**

```

c_net_calculate(
  totu,
  totu2 = NULL,
  method = "spearman",
  filename = FALSE,
  p.adjust.method = NULL,
  p.adjust.mode = "all",
  threads = 1,
  verbose = TRUE
)

```

**Arguments**

totu	t(otutab), row are samples, column are features.
totu2	t(otutab2) or NULL, row are samples, column are features.
method	"spearman" (default), "pearson", "sparce", or distance index from <a href="#">vegdist</a> .
filename	the prefix of saved .corr file or FALSE.
p.adjust.method	see <a href="#">p.adjust</a>
p.adjust.mode	see <a href="#">p.adjust.table</a>
threads	threads, default: 1.
verbose	verbose, default: TRUE.

**Value**

a corr object with 3 elements:

r	default: spearman correlation
p.value	default: p-value of spearman correlation
p.adjust	default p.adjust.method = NULL

**See Also**

Other calculate: [cal\\_sim\(\)](#), [fast\\_cor\(\)](#), [p.adjust.table\(\)](#), [read\\_corr\(\)](#)

**Examples**

```
data("otutab", package = "pcutils")
t(otutab) -> totu
c_net_calculate(totu) -> corr
metadata[, 3:10] -> env
c_net_calculate(totu, env) -> corr2
```

---

c_net_filter	<i>Filter a network according to some attributes</i>
--------------	--

---

**Description**

Filter a network according to some attributes

**Usage**

```
c_net_filter(go, ..., mode = "v")
```

**Arguments**

go	metanet object
...	some attributes of vertex and edge
mode	"v" or "e"

**Value**

metanet

**See Also**

Other manipulate: [anno\\_edge\(\)](#), [anno\\_vertex\(\)](#), [c\\_net\\_annotate\(\)](#), [c\\_net\\_load\(\)](#), [c\\_net\\_save\(\)](#), [c\\_net\\_union\(\)](#), [get\\_e\(\)](#), [get\\_n\(\)](#), [get\\_v\(\)](#), [is\\_metanet\(\)](#)

**Examples**

```
data("multi_net")
c_net_filter(multi1, v_group %in% c("omic1", "omic2"))
```

---

c\_net\_from\_edgelist     *Construct a network from edge\_list dataframe*

---

### Description

Construct a network from edge\_list dataframe

### Usage

```
c_net_from_edgelist(  
  edgelist,  
  vertex_df = NULL,  
  direct = FALSE,  
  e_type = NULL,  
  e_class = NULL  
)
```

### Arguments

edgelist	first is source, second is target, others are annotation
vertex_df	vertex metadata data.frame
direct	logical
e_type	set e_type
e_class	set e_class

### Value

metanet

### See Also

Other build: [c\\_net\\_build\(\)](#), [c\\_net\\_set\(\)](#), [c\\_net\\_update\(\)](#), [multi\\_net\\_build\(\)](#)

### Examples

```
data(edgelist)  
edge_net <- c_net_from_edgelist(arc_count, vertex_df = arc_taxonomy)  
edge_net <- c_net_set(edge_net, vertex_class = "Phylum", edge_width = "n")  
c_net_plot(edge_net)
```

---

c_net_layout	<i>Layout coordinates</i>
--------------	---------------------------

---

## Description

Layout coordinates

## Usage

```
c_net_layout(
  go,
  method = igraph::nicely(),
  order_by = NULL,
  order_ls = NULL,
  seed = 1234,
  line_curved = 0.5,
  ...
)
```

## Arguments

go	igraph or metanet
method	(1) <a href="#">as_line()</a> , <a href="#">as_arc()</a> , <a href="#">as_polygon()</a> , <a href="#">as_polyarc()</a> , <a href="#">as_polycircle()</a> , <a href="#">as_circle_tree()</a> ; (2) <a href="#">as_star()</a> , <a href="#">as_tree()</a> , <a href="#">in_circle()</a> , <a href="#">nicely()</a> , <a href="#">on_grid()</a> , <a href="#">on_sphere()</a> , <a href="#">randomly()</a> , <a href="#">with_dh()</a> , <a href="#">with_fr()</a> , <a href="#">with_gem()</a> , <a href="#">with_graphopt()</a> , <a href="#">with_kk()</a> , <a href="#">with_lgl()</a> , <a href="#">with_mds()</a> , see <a href="#">layout_</a> ; (3) a character, "auto", "backbone", "centrality", "circlepack", "dendrogram", "eigen", "focus", "hive", "igraph", "linear", "manual", "matrix", "partition", "pmds", "stress", "treemap", "unro see <a href="#">create_layout</a>
order_by	order nodes according to a node attribute
order_ls	manual the discrete variable with a vector, or continuous variable with "desc" to decreasing
seed	random seed
line_curved	consider line curved, only for some layout methods like <a href="#">as_line()</a> , <a href="#">as_polygon()</a> .default:0
...	add

## Value

coors object: coordinates for nodes, columns: name, X, Y; curved for edges, columns: from, to, curved;

## See Also

Other layout: [as\\_arc\(\)](#), [as\\_circle\\_tree\(\)](#), [as\\_line\(\)](#), [as\\_polyarc\(\)](#), [as\\_polycircle\(\)](#), [as\\_polygon\(\)](#)

**Examples**

```

library(igraph)
c_net_layout(co_net) -> coors
c_net_plot(co_net, coors)
c_net_plot(co_net, c_net_layout(co_net, in_circle()), vertex.size = 2)
c_net_plot(co_net, c_net_layout(co_net, in_circle(), order_by = "v_class"), vertex.size = 2)
c_net_plot(co_net, c_net_layout(co_net, in_circle(), order_by = "size", order_ls = "desc"))
c_net_plot(co_net, c_net_layout(co_net, as_polygon(3)))

```

---

c_net_load	<i>Load network file</i>
------------	--------------------------

---

**Description**

Load network file

**Usage**

```
c_net_load(filename, format = "data.frame")
```

**Arguments**

filename	filename
format	"data.frame", "graphml"

**Value**

metanet

**See Also**

Other manipulate: [anno\\_edge\(\)](#), [anno\\_vertex\(\)](#), [c\\_net\\_annotate\(\)](#), [c\\_net\\_filter\(\)](#), [c\\_net\\_save\(\)](#), [c\\_net\\_union\(\)](#), [get\\_e\(\)](#), [get\\_n\(\)](#), [get\\_v\(\)](#), [is\\_metanet\(\)](#)

---

c_net_plot	<i>Plot a metanet</i>
------------	-----------------------

---

**Description**

Plot a metanet

**Usage**

```
c_net_plot(  
  go,  
  coors = NULL,  
  ...,  
  labels_num = NULL,  
  vertex_size_range = NULL,  
  edge_width_range = NULL,  
  plot_module = FALSE,  
  mark_module = FALSE,  
  mark_color = NULL,  
  mark_alpha = 0.3,  
  module_label = FALSE,  
  module_label_cex = 2,  
  module_label_color = "black",  
  module_label_just = c(0.5, 0.5),  
  pie_value = NULL,  
  pie_color = NULL,  
  legend = TRUE,  
  legend_number = FALSE,  
  legend_cex = 1,  
  legend_position = c(left_leg_x = -2, left_leg_y = 1, right_leg_x = 1.2, right_leg_y =  
    1),  
  group_legend_title = NULL,  
  group_legend_order = NULL,  
  color_legend = TRUE,  
  color_legend_order = NULL,  
  size_legend = FALSE,  
  size_legend_title = "Node Size",  
  edge_legend = TRUE,  
  edge_legend_title = "Edge type",  
  edge_legend_order = NULL,  
  width_legend = FALSE,  
  width_legend_title = "Edge width",  
  lty_legend = FALSE,  
  lty_legend_title = "Edge class",  
  lty_legend_order = NULL,  
  module_legend = FALSE,  
  module_legend_title = "Module",

  pie_legend = FALSE,  
  pie_legend_title = "Pie part",  
  pie_legend_order = NULL,  
  params_list = NULL,  
  seed = 1234  
)
```

**Arguments**

go	an igraph or metanet object
coors	the coordinates you saved
...	additional parameters for <a href="#">igraph.plotting</a>
labels_num	show how many labels, >1 indicates number, <1 indicates fraction, "all" indicates all.
vertex_size_range	the vertex size range, e.g. c(1,10)
edge_width_range	the edge width range, e.g. c(1,10)
plot_module	logical, plot module?
mark_module	logical, mark the modules?
mark_color	mark color
mark_alpha	mark fill alpha, default 0.3
module_label	show module label?
module_label_cex	module label cex
module_label_color	module label color
module_label_just	module label just, default c(0.5,0.5)
pie_value	a dataframe using to plot pie (with rowname or a "name" column)
pie_color	color vector
legend	all legends
legend_number	legend with numbers
legend_cex	character expansion factor relative to current par("cex"), default: 1
legend_position	legend_position, default: c(left_leg_x=-1.9,left_leg_y=1,right_leg_x=1.2,right_leg_y=1)
group_legend_title	group_legend_title, length must same to the numbers of v_group
group_legend_order	group_legend_order vector
color_legend	logical
color_legend_order	color_legend_order vector
size_legend	logical
size_legend_title	size_legend_title
edge_legend	logical
edge_legend_title	edge_legend_title

edge_legend_order	edge_legend_order vector, e.g. c("positive","negative")
width_legend	logical
width_legend_title	width_legend_title
lty_legend	logical
lty_legend_title	lty_legend_title
lty_legend_order	lty_legend_order
module_legend	logical
module_legend_title	module_legend_title
module_legend_order	module_legend_order
pie_legend	logical
pie_legend_title	pie_legend_title
pie_legend_order	pie_legend_order
params_list	a list of parameters, e.g. list(edge_legend = TRUE, lty_legend = FALSE), when the parameter is duplicated, the format argument will be used rather than the argument in params_list.
seed	random seed, default:1234, make sure each plot is the same.

**Value**

a network plot

**See Also**

Other plot: [as.ggig\(\)](#), [input\\_gephi\(\)](#), [netD3plot\(\)](#), [olympic\\_rings\\_net\(\)](#), [plot.ggig\(\)](#), [twocol\\_edgelist\(\)](#), [venn\\_net\(\)](#)

**Examples**

```
data("c_net")
c_net_plot(co_net)
c_net_plot(co_net2)
c_net_plot(multi1)
```

---

c_net_save	<i>Save network file</i>
------------	--------------------------

---

**Description**

Save network file

**Usage**

```
c_net_save(go, filename = "net", format = "data.frame")
```

**Arguments**

go	metanet network
filename	filename
format	"data.frame", "graphml"

**Value**

No value

**See Also**

Other manipulate: [anno\\_edge\(\)](#), [anno\\_vertex\(\)](#), [c\\_net\\_annotate\(\)](#), [c\\_net\\_filter\(\)](#), [c\\_net\\_load\(\)](#), [c\\_net\\_union\(\)](#), [get\\_e\(\)](#), [get\\_n\(\)](#), [get\\_v\(\)](#), [is\\_metanet\(\)](#)

---

c_net_set	<i>Set basic attributes from totu table</i>
-----------	---

---

**Description**

Set basic attributes from totu table

**Usage**

```
c_net_set(
  go,
  ...,
  vertex_group = "v_group",
  vertex_class = "v_class",
  vertex_size = "size",
  edge_type = "e_type",
  edge_class = "e_class",
  edge_width = "width",
  node_break = 5,
  edge_break = 5,
  initialize = TRUE
)
```

**Arguments**

go	metanet an igraph object
...	some data.frames to annotate go
vertex_group	choose which column to be vertex_group (map to vertex_shape)
vertex_class	choose which column to be vertex_class (map to vertex_color)
vertex_size	choose which column to be vertex_size (map to vertex_size)
edge_type	choose which column to be edge_type (map to edge_color)
edge_class	choose which column to be edge_class (map to edge_linetype)
edge_width	choose which column to be edge_width (map to edge_width)
node_break	node_break if v_class is numeric, default: 5
edge_break	edge_break if e_type is numeric, default: 5
initialize	initialize, default: TRUE

**Value**

a metanet object

**See Also**

Other build: [c\\_net\\_build\(\)](#), [c\\_net\\_from\\_edgelist\(\)](#), [c\\_net\\_update\(\)](#), [multi\\_net\\_build\(\)](#)

**Examples**

```
data("otutab", package = "pcutils")
t(otutab) -> totu
metadata[, 3:10] -> env

data("c_net")
co_net <- c_net_set(co_net, taxonomy, data.frame("Abundance" = colSums(totu)),
  vertex_class = "Phylum", vertex_size = "Abundance"
)
co_net2 <- c_net_set(co_net2, taxonomy, data.frame(name = colnames(env), env = colnames(env)),
  vertex_class = c("Phylum", "env")
)
co_net2 <- c_net_set(co_net2, data.frame("Abundance" = colSums(totu)), vertex_size = "Abundance")
```

---

c\_net\_stability

*Evaluate the stability of a network*

---

**Description**

$$V_i = \frac{E - E_i}{E}$$

E is the global efficiency and E<sub>i</sub> is the global efficiency after the removal of the node i and its entire links.

**Usage**

```
c_net_stability(
  go_ls,
  mode = "robust_test",
  partial = 0.5,
  step = 10,
  reps = 9,
  threads = 1,
  verbose = TRUE,
  keystone = FALSE
)
```

```
robust_test(
  go_ls,
  partial = 0.5,
  step = 10,
  reps = 9,
  threads = 1,
  verbose = TRUE
)
```

```
vulnerability(go_ls, threads = 1, verbose = TRUE)
```

```
robustness(go_ls, keystone = FALSE, reps = 9, threads = 1, verbose = TRUE)
```

**Arguments**

go_ls	an igraph object or igraph list.
mode	"robust_test", "vulnerability", "robustness"
partial	how much percent vertexes be removed in total (default: 0.5, only for robust_test)
step	how many nodes be removed each time? (default: 10, only for robust_test)
reps	simulation number (default: 9)
threads	threads
verbose	verbose
keystone	remove 70%% keystones instead of remove 50%% nodes (default: False, only for robustness)

**Value**

a data.frame

data.frame (robustness class)

a vector

**Examples**

```

data("c_net")
if (requireNamespace("ggpmisc")) {
  c_net_stability(co_net, mode = "robust_test", step = 20, reps = 9) -> robust_res
  plot(robust_res, index = "Average_degree", mode = 2)
}

c_net_stability(co_net, mode = "vulnerability") -> vulnerability_res
plot(vulnerability_res)

robustness(co_net) -> robustness_res
plot(robustness_res)

module_detect(co_net) -> co_net_modu
zp_analyse(co_net_modu, mode = 2) -> co_net_modu

c_net_stability(co_net_modu, mode = "robustness", keystone = TRUE) -> robustness_res
plot(robustness_res)

```

---

c\_net\_union

*Union two networks*

---

**Description**

Union two networks

**Usage**

```
c_net_union(go1, go2)
```

**Arguments**

go1	metanet object
go2	metanet object

**Value**

metanet

**See Also**

Other manipulate: [anno\\_edge\(\)](#), [anno\\_vertex\(\)](#), [c\\_net\\_annotate\(\)](#), [c\\_net\\_filter\(\)](#), [c\\_net\\_load\(\)](#), [c\\_net\\_save\(\)](#), [get\\_e\(\)](#), [get\\_n\(\)](#), [get\\_v\(\)](#), [is\\_metanet\(\)](#)

**Examples**

```

data("c_net")
co_net_union <- c_net_union(co_net, co_net2)
c_net_plot(co_net_union)

```

---

c_net_update	<i>Update a metanet object or transform igraph object to metanet object</i>
--------------	---

---

**Description**

Update a metanet object or transform igraph object to metanet object

**Usage**

```
c_net_update(
  go,
  node_break = 5,
  edge_break = 5,
  initialize = FALSE,
  verbose = TRUE,
  uniq_v_class = FALSE
)
```

**Arguments**

go	a metanet object or igraph object
node_break	node_break if v_class is numeric, default: 5
edge_break	edge_break if e_type is numeric, default: 5
initialize	initialize?
verbose	verbose?
uniq_v_class	if TRUE, add prefix to v_class if multiple v_class belong to same v_group.

**Value**

metanet

**See Also**

Other build: [c\\_net\\_build\(\)](#), [c\\_net\\_from\\_edgelist\(\)](#), [c\\_net\\_set\(\)](#), [multi\\_net\\_build\(\)](#)

---

df2net_tree	<i>Transform a dataframe to a network edgelist.</i>
-------------	---

---

**Description**

Transform a dataframe to a network edgelist.

**Usage**

```
df2net_tree(test, fun = sum)
```

**Arguments**

test	df
fun	default: sum

**Value**

metanet

**Examples**

```
data("otutab", package = "pcutils")
cbind(taxonomy, num = rowSums(otutab))[1:20, ] -> test
df2net_tree(test) -> ttt
plot(ttt)
if (requireNamespace("ggraph")) plot(ttt, coors = as_circle_tree())
```

---

extract_sample_net	<i>Extract each sample network from the whole network</i>
--------------------	---

---

**Description**

Extract each sample network from the whole network

**Usage**

```
extract_sample_net(
  whole_net,
  otutab,
  threads = 1,
  save_net = FALSE,
  fast = TRUE,
  remove_negative = FALSE,
  verbose = TRUE
)
```

**Arguments**

whole_net	the whole network
otutab	otutab, columns are samples, these columns will be extract
threads	threads, default: 1
save_net	should save these sub_nets? FALSE or a filename
fast	less indexes for faster calculate ?
remove_negative	remove negative edge or not? default: FALSE
verbose	verbose

**Value**

a dataframe contains all sub\_net parameters

**See Also**

Other topological: [fit\\_power\(\)](#), [get\\_group\\_skeleton\(\)](#), [links\\_stat\(\)](#), [nc\(\)](#), [net\\_par\(\)](#), [rand\\_net\\_par\(\)](#), [rand\\_net\(\)](#), [smallworldness\(\)](#)

**Examples**

```
data(otutab, package = "pcutils")
extract_sample_net(co_net, otutab) -> sub_net_pars
```

---

fast_cor	<i>Fast correlation calculation</i>
----------	-------------------------------------

---

**Description**

Fast correlation calculation

**Usage**

```
fast_cor(totu, totu2 = NULL, method = c("pearson", "spearman"))
```

**Arguments**

totu	t(otutab), row are samples, column are features.
totu2	t(otutab) or NULL, row are samples, column are features.
method	"spearman" or "pearson"

**Value**

a list with 2 elements:

r	default: spearman correlation
p.value	default: p-value of spearman correlation

**See Also**

Other calculate: [c\\_net\\_calculate\(\)](#), [cal\\_sim\(\)](#), [p.adjust.table\(\)](#), [read\\_corr\(\)](#)

**Examples**

```
data("otutab", package = "pcutils")
t(otutab[1:100, ]) -> totu
fast_cor(totu, method = "spearman") -> corr
```

---

filter_n_module	<i>Filter some modules as others</i>
-----------------	--------------------------------------

---

### Description

Filter some modules as others  
Combine or cut modules to module\_number  
Plot module tree

### Usage

```
filter_n_module(go_m, n_node_in_module = 0, keep_id = NULL, delete = FALSE)  
  
combine_n_module(go_m, module_number = 5)  
  
plot_module_tree(go_m, module = "module", community = NULL, label.size = 2)
```

### Arguments

go_m	module metanet
n_node_in_module	transfer the modules less than n_node_in_module to "others"
keep_id	keep modules ids, will not be "others"
delete	logical, delete others modules? default:FALSE, the others module will be "others".
module_number	number of modules
module	which column name is module. default: "module"
community	community object, default: NULL, use the community of go_m
label.size	label.size

### Value

metanet with modules  
ggplot

### See Also

Other module: [get\\_community\(\)](#), [get\\_module\\_eigen\(\)](#), [get\\_module\(\)](#), [module\\_detect\(\)](#), [module\\_eigen\(\)](#), [module\\_net\(\)](#), [summary\\_module\(\)](#), [to\\_module\\_net\(\)](#), [zp\\_analyse\(\)](#)

## Examples

```
data("c_net")
module_detect(co_net) -> co_net_modu
filter_n_module(co_net_modu, n_node_in_module = 30) -> co_net_modu
if (requireNamespace("ggtree") && requireNamespace("treeio")) plot_module_tree(co_net_modu)
combine_n_module(co_net_modu, 20) -> co_net_modu1
if (requireNamespace("ggtree") && requireNamespace("treeio")) plot_module_tree(co_net_modu1)
```

---

fit\_power

*Fit power-law distribution for an igraph*

---

## Description

Fit power-law distribution for an igraph

## Usage

```
fit_power(go, p.value = FALSE)
```

## Arguments

go	igraph
p.value	calculate p.value

## Value

ggplot

## See Also

Other topological: [extract\\_sample\\_net\(\)](#), [get\\_group\\_skeleton\(\)](#), [links\\_stat\(\)](#), [nc\(\)](#), [net\\_par\(\)](#), [rand\\_net\\_par\(\)](#), [rand\\_net\(\)](#), [smallworldness\(\)](#)

## Examples

```
fit_power(co_net)
```

---

get_community	<i>Get community</i>
---------------	----------------------

---

**Description**

Get community

**Usage**

```
get_community(go_m)
```

**Arguments**

go_m	module metanet
------	----------------

**Value**

community

**See Also**

Other module: [filter\\_n\\_module\(\)](#), [get\\_module\\_eigen\(\)](#), [get\\_module\(\)](#), [module\\_detect\(\)](#), [module\\_eigen\(\)](#), [module\\_net\(\)](#), [summary\\_module\(\)](#), [to\\_module\\_net\(\)](#), [zp\\_analyse\(\)](#)

---

get_e	<i>Get edge information</i>
-------	-----------------------------

---

**Description**

Get edge information

**Usage**

```
get_e(go, index = NULL)
```

**Arguments**

go	metanet object
index	attribute name, default: NULL

**Value**

data.frame

**See Also**

Other manipulate: [anno\\_edge\(\)](#), [anno\\_vertex\(\)](#), [c\\_net\\_annotate\(\)](#), [c\\_net\\_filter\(\)](#), [c\\_net\\_load\(\)](#), [c\\_net\\_save\(\)](#), [c\\_net\\_union\(\)](#), [get\\_n\(\)](#), [get\\_v\(\)](#), [is\\_metanet\(\)](#)

---

get\_group\_skeleton      *Get skeleton network according to a group*

---

### Description

Get skeleton network according to a group

Skeleton plot

### Usage

```
get_group_skeleton(go, Group = "v_class", count = NULL, top_N = 8)
```

```
skeleton_plot(ske_net, split_e_type = TRUE, ...)
```

### Arguments

go	network
Group	vertex column name
count	take which column count, default: NULL
top_N	top_N
ske_net	skeleton
split_e_type	split by e_type? default: TRUE
...	additional parameters for <a href="#">igraph.plotting</a>

### Value

skeleton network

### See Also

Other topological: [extract\\_sample\\_net\(\)](#), [fit\\_power\(\)](#), [links\\_stat\(\)](#), [nc\(\)](#), [net\\_par\(\)](#), [rand\\_net\\_par\(\)](#), [rand\\_net\(\)](#), [smallworldness\(\)](#)

### Examples

```
get_group_skeleton(co_net) -> ske_net  
skeleton_plot(ske_net)
```

---

get_module	<i>Get module</i>
------------	-------------------

---

**Description**

Get module

**Usage**

```
get_module(go_m)
```

**Arguments**

go_m	module metanet
------	----------------

**Value**

module

**See Also**

Other module: [filter\\_n\\_module\(\)](#), [get\\_community\(\)](#), [get\\_module\\_eigen\(\)](#), [module\\_detect\(\)](#), [module\\_eigen\(\)](#), [module\\_net\(\)](#), [summary\\_module\(\)](#), [to\\_module\\_net\(\)](#), [zp\\_analyse\(\)](#)

---

get_module_eigen	<i>Get module_eigen</i>
------------------	-------------------------

---

**Description**

Get module\_eigen

**Usage**

```
get_module_eigen(go_m)
```

**Arguments**

go_m	module metanet
------	----------------

**Value**

module\_eigen

**See Also**

Other module: [filter\\_n\\_module\(\)](#), [get\\_community\(\)](#), [get\\_module\(\)](#), [module\\_detect\(\)](#), [module\\_eigen\(\)](#), [module\\_net\(\)](#), [summary\\_module\(\)](#), [to\\_module\\_net\(\)](#), [zp\\_analyse\(\)](#)

---

get_n	<i>Get network information</i>
-------	--------------------------------

---

**Description**

Get network information

**Usage**

```
get_n(go, index = NULL, simple = FALSE)
```

**Arguments**

go	metanet object
index	attribute name, default: NULL
simple	logical, get simple index

**Value**

data.frame

**See Also**

Other manipulate: [anno\\_edge\(\)](#), [anno\\_vertex\(\)](#), [c\\_net\\_annotate\(\)](#), [c\\_net\\_filter\(\)](#), [c\\_net\\_load\(\)](#), [c\\_net\\_save\(\)](#), [c\\_net\\_union\(\)](#), [get\\_e\(\)](#), [get\\_v\(\)](#), [is\\_metanet\(\)](#)

---

get_v	<i>Get vertex information</i>
-------	-------------------------------

---

**Description**

Get vertex information

**Usage**

```
get_v(go, index = NULL)
```

**Arguments**

go	metanet object
index	attribute name, default: NULL

**Value**

data.frame

**See Also**

Other manipulate: [anno\\_edge\(\)](#), [anno\\_vertex\(\)](#), [c\\_net\\_annotate\(\)](#), [c\\_net\\_filter\(\)](#), [c\\_net\\_load\(\)](#), [c\\_net\\_save\(\)](#), [c\\_net\\_union\(\)](#), [get\\_e\(\)](#), [get\\_n\(\)](#), [is\\_metanet\(\)](#)

---

g_layout	<i>Layout with group</i>
----------	--------------------------

---

**Description**

Layout with group

**Usage**

```
g_layout(
  go,
  group = "module",
  group_order = NULL,
  layout1 = in_circle(),
  zoom1 = 20,
  layout2 = in_circle(),
  zoom2 = 3,
  show_big_layout = FALSE,
  ...
)
```

**Arguments**

go	igraph or metanet object
group	group name (default: module)
group_order	group_order
layout1	layout1 method, one of (1) a dataframe or matrix: rowname is group, two columns are X and Y (2) function: layout method for <a href="#">c_net_layout</a> default: <a href="#">in_circle()</a>
zoom1	big network layout size
layout2	one of functions: layout method for <a href="#">c_net_layout</a> , or a list of functions.
zoom2	average sub_network layout size, or numeric vector, or "auto"
show_big_layout	show the big layout to help you adjust.
...	add

**Value**

coors

**See Also**

Other g\_layout: [g\\_layout\\_nice\(\)](#), [g\\_layout\\_polygon\(\)](#)

**Examples**

```
data("c_net")
module_detect(co_net, method = "cluster_fast_greedy") -> co_net_modu
g_layout(co_net_modu, group = "module", zoom1 = 30, zoom2 = "auto", layout2 = as_line()) -> oridata
plot(co_net_modu, coors = oridata)
```

---

g_layout_nice	<i>Layout with group nicely</i>
---------------	---------------------------------

---

**Description**

Layout with group nicely

**Usage**

```
g_layout_nice(go, group = "module", mode = "circlepack", ...)
```

```
g_layout_circlepack(go, group = "module", ...)
```

```
g_layout_treemap(go, group = "module", ...)
```

```
g_layout_backbone(go, group = "module", ...)
```

```
g_layout_stress(go, group = "module", ...)
```

**Arguments**

go	igraph or metanet
group	group name (default: module)
mode	circlepack, treemap, backbone, stress
...	add

**Value**

coors

**See Also**

Other g\_layout: [g\\_layout\\_polygon\(\)](#), [g\\_layout\(\)](#)

**Examples**

```
data("c_net")
module_detect(co_net, method = "cluster_fast_greedy") -> co_net_modu
if (requireNamespace("ggraph")) {
  plot(co_net_modu, coors = g_layout_nice(co_net_modu, group = "module"))
  plot(co_net_modu, coors = g_layout_nice(co_net_modu, group = "module", mode = "treemap"))
}
```

---

`g_layout_polygon`      *Layout with group as a polygon*

---

**Description**

Layout with group as a polygon

Layout with group as a polyarc

Layout with group as a polyarc

**Usage**

```
g_layout_polygon(
  go,
  group = "v_group",
  group_order = NULL,
  group2 = NULL,
  group2_order = NULL,
  line_curved = 0.5
)

g_layout_polyarc(
  go,
  group = "v_group",
  group_order = NULL,
  group2 = NULL,
  group2_order = NULL,
  space = pi/4,
  scale_node_num = TRUE
)

g_layout_polycircle(
  go,
  group = "v_group",
  group_order = NULL,
  group2 = NULL,
  group2_order = NULL
)
```

**Arguments**

go	igraph
group	group name (default:v_group)
group_order	group_order
group2	group2 name, will order nodes in each group according to group2_order
group2_order	group2_order
line_curved	line_curved 0~1
space	the space between each arc, default: pi/4
scale_node_num	scale with the node number in each group

**Value**

coors

**See Also**

Other g\_layout: [g\\_layout\\_nice\(\)](#), [g\\_layout\(\)](#)

**Examples**

```
g_layout_polygon(multi1) -> oridata
c_net_plot(multi1, oridata)
g_layout_polyarc(multi1, group2 = "v_class", group2_order = c(LETTERS[4:1])) -> oridata
c_net_plot(multi1, oridata)
g_layout_polycircle(co_net2, group2 = "v_class") -> oridata
c_net_plot(co_net2, oridata)
```

---

input\_gephi

*Input a graphml file exported by Gephi*

---

**Description**

Input a graphml file exported by Gephi

**Usage**

```
input_gephi(file)
```

**Arguments**

file	graphml file exported by Gephi
------	--------------------------------

**Value**

list contains the igraph object and coordinates

**See Also**

Other plot: [as.ggig\(\)](#), [c\\_net\\_plot\(\)](#), [netD3plot\(\)](#), [olympic\\_rings\\_net\(\)](#), [plot.ggig\(\)](#), [twocol\\_edgelist\(\)](#), [venn\\_net\(\)](#)

---

is_metanet	<i>Is this object a metanet object?</i>
------------	---

---

**Description**

Is this object a metanet object?

**Usage**

```
is_metanet(go)
```

**Arguments**

go                    a test object

**Value**

logical

**See Also**

Other manipulate: [anno\\_edge\(\)](#), [anno\\_vertex\(\)](#), [c\\_net\\_annotate\(\)](#), [c\\_net\\_filter\(\)](#), [c\\_net\\_load\(\)](#), [c\\_net\\_save\(\)](#), [c\\_net\\_union\(\)](#), [get\\_e\(\)](#), [get\\_n\(\)](#), [get\\_v\(\)](#)

**Examples**

```
data(c_net)
is_metanet(co_net)
```

---

links_stat	<i>Link summary of the network</i>
------------	------------------------------------

---

**Description**

Link summary of the network

**Usage**

```
links_stat(
  go,
  group = "v_class",
  e_type = "all",
  topN = 10,
  colors = NULL,
  mode = 1,
  plot_param = list()
)
```

**Arguments**

go	igraph or metanet
group	summary which group of vertex attribution in names(vertex_attr(go))
e_type	"positive", "negative", "all"
topN	topN of group, default: 10
colors	colors
mode	1~2
plot_param	plot parameters

**Value**

plot

**See Also**

Other topological: [extract\\_sample\\_net\(\)](#), [fit\\_power\(\)](#), [get\\_group\\_skeleton\(\)](#), [nc\(\)](#), [net\\_par\(\)](#), [rand\\_net\\_par\(\)](#), [rand\\_net\(\)](#), [smallworldness\(\)](#)

**Examples**

```
if (requireNamespace("circlize")) {
  links_stat(co_net, topN = 10)
  module_detect(co_net) -> co_net_modu
  links_stat(co_net_modu, group = "module")
}
if (requireNamespace("corrplot")) {
  links_stat(co_net, topN = 10, mode = 2)
}
```

module_detect	<i>Detect the modules</i>
---------------	---------------------------

---

**Description**

Detect the modules

**Usage**

```
module_detect(  
  go,  
  method = "cluster_fast_greedy",  
  n_node_in_module = 0,  
  delete = FALSE  
)
```

**Arguments**

go	an igraph object
method	cluster_method: "cluster_walktrap", "cluster_edge_betweenness", "cluster_fast_greedy", "cluster_spinglass"
n_node_in_module	transfer the modules less than n_node_in_module to "others"
delete	logical, delete others modules? default:FALSE, the others module will be "others".

**Value**

an igraph object

**See Also**

Other module: [filter\\_n\\_module\(\)](#), [get\\_community\(\)](#), [get\\_module\\_eigen\(\)](#), [get\\_module\(\)](#), [module\\_eigen\(\)](#), [module\\_net\(\)](#), [summary\\_module\(\)](#), [to\\_module\\_net\(\)](#), [zp\\_analyse\(\)](#)

**Examples**

```
data("c_net")
module_detect(co_net) -> co_net_modu
```

---

module_eigen	<i>Calculate the eigenvalue of each module and correlation of nodes and eigenvalue (node_eigen_cor).</i>
--------------	--

---

**Description**

Calculate the eigenvalue of each module and correlation of nodes and eigenvalue (node\_eigen\_cor).  
Plot the expression of each modules

**Usage**

```
module_eigen(go_m, totu, cor_method = "spearman")
```

```
module_expression(
  go_m,
  totu,
  group = NULL,
  r_threshold = 0.6,
  x_order = NULL,
  facet_param = NULL,
  plot_eigen = FALSE
)
```

**Arguments**

go_m	module metanet
totu	original abundance table used for module_eigen().
cor_method	"pearson", "kendall", "spearman"
group	group variable for totu
r_threshold	the threshold for node_eigen_cor, default: 0.6.
x_order	order the x axis.
facet_param	parameters parse to <a href="#">facet_wrap</a> , e.g. nrow=2.
plot_eigen	plot the eigen value line.

**Value**

module metanet with module\_eigen

**See Also**

Other module: [filter\\_n\\_module\(\)](#), [get\\_community\(\)](#), [get\\_module\\_eigen\(\)](#), [get\\_module\(\)](#), [module\\_detect\(\)](#), [module\\_net\(\)](#), [summary\\_module\(\)](#), [to\\_module\\_net\(\)](#), [zp\\_analyse\(\)](#)

**Examples**

```
data("otutab", package = "pcutils")
t(otutab) -> totu
data("c_net")
module_detect(co_net, n_node_in_module = 30) -> co_net_modu
module_eigen(co_net_modu, totu) -> co_net_modu
module_expression(co_net_modu, totu)
```

---

module\_net

*Generate a n-modules network*

---

**Description**

this is just a random generation method, the module number of result is not exactly the module\_number, you can change the inter\_module\_density and intra\_module\_density to get the proper result.

**Usage**

```
module_net(
  module_number = 3,
  n_node_in_module = 30,
  intra_module_density = 0.3,
  inter_module_density = 0.01
)
```

**Arguments**

module\_number    number of modules  
 n\_node\_in\_module  
                   number of nodes in each modules  
 intra\_module\_density  
                   intra\_module\_density, recommend bigger than 20\*inter\_module\_density, default:0.3  
 inter\_module\_density  
                   inter\_module\_density, default:0.01

**Value**

n-modules metanet

**See Also**

Other module: [filter\\_n\\_module\(\)](#), [get\\_community\(\)](#), [get\\_module\\_eigen\(\)](#), [get\\_module\(\)](#), [module\\_detect\(\)](#), [module\\_eigen\(\)](#), [summary\\_module\(\)](#), [to\\_module\\_net\(\)](#), [zp\\_analyse\(\)](#)

**Examples**

```

g1 <- module_net()
get_n(g1)
plot(g1, mark_module = TRUE)
plot(g1, coors = g_layout(g1, zoom2 = 20))
plot(g1, coors = g_layout_polyarc(g1, group = "module"))
plot(g1, coors = g_layout_polygon(g1, group = "module"))

```

---

multi1

*MetaNet networks*

---

**Description**

MetaNet co\_nets

---

multi\_net\_build

*Multi-omics network build*

---

**Description**

Multi-omics network build

**Usage**

```
multi_net_build(
  ...,
  mode = "full",
  method = "spearman",
  filename = FALSE,
  p.adjust.method = NULL,
  r_threshold = 0.6,
  p_threshold = 0.05,
  use_p_adj = TRUE,
  delete_single = TRUE
)
```

**Arguments**

...	some omics abundance tables
mode	"full"
method	"spearman" or "pearson"
filename	the prefix of saved .corr file or FALSE
p.adjust.method	see <a href="#">p.adjust</a>
r_threshold	r_threshold (default: >0.6)
p_threshold	p_threshold (default: <0.05)
use_p_adj	use the p.adjust instead of p-value (default: TRUE)
delete_single	should delete single vertexes?

**Value**

metanet

**See Also**

Other build: [c\\_net\\_build\(\)](#), [c\\_net\\_from\\_edgelist\(\)](#), [c\\_net\\_set\(\)](#), [c\\_net\\_update\(\)](#)

**Examples**

```
data("multi_test")
multi1 <- multi_net_build(list(Microbiome = micro, Metabolome = metab, Transcriptome = transc))
multi1 <- c_net_set(multi1, micro_g, metab_g, transc_g,
  vertex_class = c("Phylum", "kingdom", "type")
)
multi1 <- c_net_set(multi1, data.frame("Abundance1" = colSums(micro)),
  data.frame("Abundance2" = colSums(metab)), data.frame("Abundance3" = colSums(transc)),
  vertex_size = paste0("Abundance", 1:3)
)
c_net_plot(multi1)
```

---

nc	<i>Calculate natural_connectivity</i>
----	---------------------------------------

---

**Description**

Calculate `natural_connectivity`

**Usage**

```
nc(p)
```

**Arguments**

`p` an `igraph` or `metanet` object

**Value**

`natural_connectivity` (numeric)

**References**

``nc`` in ``ggClusterNet``

**See Also**

Other topological: [extract\\_sample\\_net\(\)](#), [fit\\_power\(\)](#), [get\\_group\\_skeleton\(\)](#), [links\\_stat\(\)](#), [net\\_par\(\)](#), [rand\\_net\\_par\(\)](#), [rand\\_net\(\)](#), [smallworldness\(\)](#)

**Examples**

```
igraph::make_ring(10) %>% nc()
```

---

netD3plot	<i>plot use networkD3</i>
-----------	---------------------------

---

**Description**

plot use `networkD3`

**Usage**

```
netD3plot(go, v_class = "v_class", ...)
```

**Arguments**

go                   metanet  
v\_class              which attributes use to be v\_class  
...                   see [forceNetwork](#)

**Value**

D3 plot

**See Also**

Other plot: [as.ggig\(\)](#), [c\\_net\\_plot\(\)](#), [input\\_gephi\(\)](#), [olympic\\_rings\\_net\(\)](#), [plot.ggig\(\)](#), [twocol\\_edgelist\(\)](#), [venn\\_net\(\)](#)

**Examples**

```
data("c_net")
plot(co_net2)
if (requireNamespace("networkD3")) {
  netD3plot(co_net2)
}
```

---

net\_par

*Calculate all topological indexes of a network*

---

**Description**

Calculate all topological indexes of a network

Add topological indexes for a network

**Usage**

```
net_par(  
  go,  
  mode = c("v", "e", "n", "all"),  
  fast = TRUE,  
  remove_negative = FALSE  
)  
  
c_net_index(go, force = FALSE)
```

**Arguments**

go	igraph or metanet
mode	calculate what? c("v", "e", "n", "all")
fast	less indexes for faster calculate ?
remove_negative	remove negative edge or not? default: FALSE
force	replace existed net_par

**Value**

	a 3-elements list
n_index	indexes of the whole network
v_index	indexes of each vertex
e_index	indexes of each edge

**See Also**

Other topological: [extract\\_sample\\_net\(\)](#), [fit\\_power\(\)](#), [get\\_group\\_skeleton\(\)](#), [links\\_stat\(\)](#), [nc\(\)](#), [rand\\_net\\_par\(\)](#), [rand\\_net\(\)](#), [smallworldness\(\)](#)

**Examples**

```
igraph::make_graph("Walther") %>% net_par()
c_net_index(co_net) -> co_net_with_par
```

---

olympic\_rings\_net      *Plot olympic rings using network*

---

**Description**

Plot olympic rings using network

**Usage**

```
olympic_rings_net()
```

**Value**

network plot

**See Also**

Other plot: [as.ggig\(\)](#), [c\\_net\\_plot\(\)](#), [input\\_gephi\(\)](#), [netD3plot\(\)](#), [plot.ggig\(\)](#), [twocol\\_edgelist\(\)](#), [venn\\_net\(\)](#)

**Examples**

```
olympic_rings_net()
```

---

p.adjust.table	<i>p.adjust apply on a correlation table (matrix or data.frame)</i>
----------------	---

---

**Description**

p.adjust apply on a correlation table (matrix or data.frame)

**Usage**

```
p.adjust.table(pp, method = "BH", mode = "all")
```

**Arguments**

pp	table of p-values
method	see <a href="#">p.adjust</a> , default: "BH".
mode	"all" for all values; "rows" adjust each row one by one; "columns" adjust each column one by one. Default: "all".

**Value**

a table of adjusted p-values

**See Also**

Other calculate: [c\\_net\\_calculate\(\)](#), [cal\\_sim\(\)](#), [fast\\_cor\(\)](#), [read\\_corr\(\)](#)

**Examples**

```
matrix(abs(rnorm(100, 0.01, 0.1)), 10, 10) -> pp  
p.adjust.table(pp, method = "BH", mode = "all") -> pp_adj
```

---

plot.ggig	<i>Plot a ggig</i>
-----------	--------------------

---

**Description**

Plot a ggig

**Usage**

```
## S3 method for class 'ggig'
plot(
  x,
  coors = NULL,
  ...,
  labels_num = NULL,
  vertex_size_range = NULL,
  edge_width_range = NULL,
  plot_module = FALSE,
  mark_module = FALSE,
  mark_color = NULL,
  mark_alpha = 0.3,
  module_label = FALSE,
  module_label_cex = 2,
  module_label_color = "black",
  module_label_just = c(0.5, 0.5),
  legend_number = FALSE,
  legend = TRUE,
  legend_cex = 1,
  legend_position = c(left_leg_x = -2, left_leg_y = 1, right_leg_x = 1.2, right_leg_y =
    1),
  group_legend_title = NULL,
  group_legend_order = NULL,
  color_legend = TRUE,
  color_legend_order = NULL,
  size_legend = FALSE,
  size_legend_title = "Node Size",
  edge_legend = TRUE,
  edge_legend_title = "Edge type",
  edge_legend_order = NULL,
  width_legend = FALSE,
  width_legend_title = "Edge width",
  lty_legend = FALSE,
  lty_legend_title = "Edge class",
  lty_legend_order = NULL,
  params_list = NULL,
  seed = 1234
)
```

**Arguments**

x	ggig object
coors	the coordinates you saved
...	additional parameters for <a href="#">igraph.plotting</a>
labels_num	show how many labels, >1 indicates number, <1 indicates fraction, "all" indicates all.

```

vertex_size_range      the vertex size range, e.g. c(1,10)
edge_width_range      the edge width range, e.g. c(1,10)
plot_module           logical, plot module?
mark_module           logical, mark the modules?
mark_color            mark color
mark_alpha            mark fill alpha, default 0.3
module_label          show module label?
module_label_cex      module label cex
module_label_color    module label color
module_label_just     module label just, default c(0.5,0.5)
legend_number         legend with numbers
legend                all legends
legend_cex            character expansion factor relative to current par("cex"), default: 1
legend_position       legend_position, default: c(left_leg_x=-1.9,left_leg_y=1,right_leg_x=1.2,right_leg_y=1)
group_legend_title    group_legend_title, length must same to the numbers of v_group
group_legend_order    group_legend_order vector
color_legend          logical
color_legend_order    color_legend_order vector
size_legend           logical
size_legend_title     size_legend_title
edge_legend           logical
edge_legend_title     edge_legend_title
edge_legend_order     edge_legend_order vector, e.g. c("positive","negative")
width_legend          logical
width_legend_title    width_legend_title
lty_legend            logical
lty_legend_title     lty_legend_title
lty_legend_order     lty_legend_order

```

`params_list` a list of parameters, e.g. `list(edge_legend = TRUE, lty_legend = FALSE)`, when the parameter is duplicated, the format argument will be used rather than the argument in `params_list`.

`seed` random seed, default:1234, make sure each plot is the same.

**Value**

ggplot

**See Also**

Other plot: [as.ggig\(\)](#), [c\\_net\\_plot\(\)](#), [input\\_gephi\(\)](#), [netD3plot\(\)](#), [olympic\\_rings\\_net\(\)](#), [twocol\\_edgelist\(\)](#), [venn\\_net\(\)](#)

rand_net	<i>Degree distribution comparison with random network</i>
----------	---

---

**Description**

Degree distribution comparison with random network

**Usage**

```
rand_net(go = go, plot = TRUE)
```

**Arguments**

go	igraph object
plot	plot or not

**Value**

ggplot

**See Also**

Other topological: [extract\\_sample\\_net\(\)](#), [fit\\_power\(\)](#), [get\\_group\\_skeleton\(\)](#), [links\\_stat\(\)](#), [nc\(\)](#), [net\\_par\(\)](#), [rand\\_net\\_par\(\)](#), [smallworldness\(\)](#)

**Examples**

```
rand_net(co_net)
```

---

rand_net_par	<i>Net_pars of many random network</i>
--------------	--

---

**Description**

Net\_pars of many random network

Compare some indexes between your net with random networks

**Usage**

```
rand_net_par(go, reps = 99, threads = 1, verbose = TRUE)

compare_rand(
  pars,
  randp,
  index = c("Average_path_length", "Clustering_coefficient")
)
```

**Arguments**

go	igraph
reps	simulation time
threads	threads
verbose	verbose
pars	your net pars resulted by net_pars()
randp	random networks pars resulted by rand_net_par()
index	compared indexes: "Average_path_length", "Clustering_coefficient" or else

**Value**

ggplot

**See Also**

Other topological: [extract\\_sample\\_net\(\)](#), [fit\\_power\(\)](#), [get\\_group\\_skeleton\(\)](#), [links\\_stat\(\)](#), [nc\(\)](#), [net\\_par\(\)](#), [rand\\_net\(\)](#), [smallworldness\(\)](#)

**Examples**

```
data("c_net")
rand_net_par(co_net_rmt, reps = 30) -> randp
net_par(co_net_rmt, fast = FALSE) -> pars
compare_rand(pars, randp)
```

---

read\_corr

*Read a corr object*

---

**Description**

Read a corr object

**Usage**

```
read_corr(filename)
```

**Arguments**

filename	filename of .corr
----------	-------------------

**Value**

a corr object

**See Also**

Other calculate: [c\\_net\\_calculate\(\)](#), [cal\\_sim\(\)](#), [fast\\_cor\(\)](#), [p.adjust.table\(\)](#)

---

`RMT_threshold`*Get RMT threshold for a correlation matrix*

---

**Description**

Get RMT threshold for a correlation matrix

Get RMT threshold for a correlation matrix roughly

**Usage**

```
RMT_threshold(  
  occur.r,  
  out_dir,  
  min_threshold = 0.5,  
  max_threshold = 0.8,  
  step = 0.02,  
  gif = FALSE,  
  verbose = FALSE  
)
```

```
rmt(occur.r, min_threshold = 0.5, max_threshold = 0.85, step = 0.01)
```

**Arguments**

<code>occur.r</code>	a corr object or a correlation matrix
<code>out_dir</code>	output dir
<code>min_threshold</code>	<code>min_threshold</code>
<code>max_threshold</code>	<code>max_threshold</code>
<code>step</code>	<code>step</code>
<code>gif</code>	render a .gif file?
<code>verbose</code>	<code>verbose</code>

**Value**

a r-threshold

recommend threshold

**References**

J. Zhou, Y. Deng, FALSE. Luo, Z. He, Q. Tu, X. Zhi, (2010) Functional Molecular Ecological Networks, doi:10.1128/mBio.00169-10. [https://matstat.org/content\\_en/RMT/RMThreshold\\_Intro.pdf](https://matstat.org/content_en/RMT/RMThreshold_Intro.pdf)

**Examples**

```
data(otutab, package = "pcutils")
t(otutab) -> totu
c_net_calculate(totu) -> corr
rmt(corr)
# recommend: 0.69
c_net_build(corr, r_threshold = 0.69) -> co_net_rmt
```

---

save_corr	<i>Save a corr object</i>
-----------	---------------------------

---

**Description**

Save a corr object

**Usage**

```
save_corr(corr, filename = "corr")
```

**Arguments**

corr	a corr object
filename	filename without extension, default: "corr"

**Value**

a .corr file

---

show_MetaNet_logo	<i>Show MetaNet logo</i>
-------------------	--------------------------

---

**Description**

Show MetaNet logo

**Usage**

```
show_MetaNet_logo()
```

**Value**

picture

---

smallworldness	<i>Calculate small-world coefficient</i>
----------------	--

---

**Description**

Calculate small-world coefficient

**Usage**

```
smallworldness(go, reps = 99, threads = 1, verbose = TRUE)
```

**Arguments**

go	igraph or metanet
reps	simulation time
threads	threads
verbose	verbose

**Value**

number

**See Also**

Other topological: [extract\\_sample\\_net\(\)](#), [fit\\_power\(\)](#), [get\\_group\\_skeleton\(\)](#), [links\\_stat\(\)](#), [nc\(\)](#), [net\\_par\(\)](#), [rand\\_net\\_par\(\)](#), [rand\\_net\(\)](#)

**Examples**

```
# set reps at least 99 when you run.  
smallworldness(co_net, reps = 9)
```

---

summary.corr	<i>Summary method for 'corr' objects</i>
--------------	--

---

**Description**

Summary method for 'corr' objects

**Usage**

```
## S3 method for class 'corr'  
summary(object, ...)
```

**Arguments**

object           'corr' object  
 ...             Additional arguments

**Value**

No value

---

summary_module	<i>Summary module index</i>
----------------	-----------------------------

---

**Description**

Summary module index

**Usage**

```
summary_module(go_m, var = "v_class", module = "module", ...)
```

**Arguments**

go\_m            module metanet  
 var            variable name  
 module         which column name is module. default: "module"  
 ...            add

**Value**

ggplot

**See Also**

Other module: [filter\\_n\\_module\(\)](#), [get\\_community\(\)](#), [get\\_module\\_eigen\(\)](#), [get\\_module\(\)](#), [module\\_detect\(\)](#), [module\\_eigen\(\)](#), [module\\_net\(\)](#), [to\\_module\\_net\(\)](#), [zp\\_analyse\(\)](#)

**Examples**

```
data("c_net")
module_detect(co_net, n_node_in_module = 30) -> co_net_modu
summary_module(co_net_modu, var = "v_class", module = "module")
summary_module(co_net_modu, var = "Abundance", module = "module")
```

---

summ_2col	<i>Summaries two columns information</i>
-----------	--

---

**Description**

Summaries two columns information

**Usage**

```
summ_2col(df, from = 1, to = 2, count = 3, direct = FALSE)
```

**Arguments**

df	data.frame
from	first column name or index
to	second column name or index
count	(optional) weight column, if no, each equal to 1
direct	consider direct? default: FALSE

**Value**

data.frame

**Examples**

```
test <- data.frame(
  a = sample(letters[1:4], 10, replace = TRUE),
  b = sample(letters[1:4], 10, replace = TRUE)
)
summ_2col(test, direct = TRUE)
summ_2col(test, direct = FALSE)
if (requireNamespace("circlize")) {
  summ_2col(test, direct = TRUE) %>% pcutils::my_circo()
}
```

---

to_module_net	<i>Transformation a network to a module network</i>
---------------	---

---

**Description**

Transformation a network to a module network

**Usage**

```
to_module_net(go, edge_type = c("module", "module_from", "module_to")[1])
```

**Arguments**

go metanet  
 edge\_type "module", "module\_from", "module\_to"

**Value**

metanet with modules

**See Also**

Other module: [filter\\_n\\_module\(\)](#), [get\\_community\(\)](#), [get\\_module\\_eigen\(\)](#), [get\\_module\(\)](#), [module\\_detect\(\)](#), [module\\_eigen\(\)](#), [module\\_net\(\)](#), [summary\\_module\(\)](#), [zp\\_analyse\(\)](#)

---

transc	<i>MetaNet networks abundance</i>
--------	-----------------------------------

---

**Description**

MetaNet co\_nets

---

transc_g	<i>MetaNet networks metadata</i>
----------	----------------------------------

---

**Description**

MetaNet co\_nets

---

twocol_edgelist	<i>Quick build a metanet from two columns table</i>
-----------------	---

---

**Description**

Quick build a metanet from two columns table

**Usage**

```
twocol_edgelist(edgelist)
```

**Arguments**

edgelist two columns table (no elements exist in two columns at same time)

**Value**

metanet

**See Also**

Other plot: [as.ggig\(\)](#), [c\\_net\\_plot\(\)](#), [input\\_gephi\(\)](#), [netD3plot\(\)](#), [olympic\\_rings\\_net\(\)](#), [plot.ggig\(\)](#), [venn\\_net\(\)](#)

**Examples**

```
twocol <- data.frame(
  "col1" = sample(letters, 30, replace = TRUE),
  "col2" = sample(c("A", "B"), 30, replace = TRUE)
)
twocol_net <- twocol_edgelist(twocol)
plot(twocol_net)
c_net_plot(twocol_net, g_layout_polygon(twocol_net))
```

---

venn\_net

*Venn network*

---

**Description**

Venn network

**Usage**

```
venn_net(tab)
```

**Arguments**

tab                    data.frame (row is elements, column is group), or a list (names is group, value is elements)

**Value**

plot

**See Also**

Other plot: [as.ggig\(\)](#), [c\\_net\\_plot\(\)](#), [input\\_gephi\(\)](#), [netD3plot\(\)](#), [olympic\\_rings\\_net\(\)](#), [plot.ggig\(\)](#), [twocol\\_edgelist\(\)](#)

**Examples**

```
data(otutab, package = "pcutils")
tab <- otutab[400:485, 1:3]
venn_net(tab) -> v_net
plot(v_net)
```

---

`zp_analyse`*Zi-Pi calculate*

---

**Description**

Zi-Pi calculate

Zi-Pi plot of vertexes

**Usage**

```
zp_analyse(go_m, mode = 2, use_origin = TRUE)
```

```
zp_plot(go, label = TRUE, mode = 1)
```

**Arguments**

<code>go_m</code>	igraph object after <code>module_detect()</code>
<code>mode</code>	plot style, 1~3
<code>use_origin</code>	use original_module, default:TRUE, if FALSE, use module
<code>go</code>	igraph object after <code>zp_analyse()</code>
<code>label</code>	show label or not

**Value**

igraph  
a ggplot object
